

# QBI Cobol Errors

## Problem:

Quickbooks is trying to grant permission to QBI to access the company file, but the Quickbooks user is not the administrator for this company file.

This error should only occur when running QBI for the first time, when Quickbooks is trying to update its “Integrated Applications” (in the Quickbooks Preferences screen).

## Solution:

Close Quickbooks, then restart. Login as the Quickbooks administrator for this company, then restart QBI.

Once QBI has been established as a valid “Integrated Application” for this company file, it is no longer necessary to login to Quickbooks as the administrator for this company.

## Note:

This issue must be dealt with for each and every Quickbooks company that integrates with QBI!
